

## **Axis Global Systems Selects Cadre's Cadence Fulfillment Software to Streamline Logistics Operations**

November 17, 2005, Denver, Colorado, Cadre Technologies today announced that Axis Global Systems of Maspeth, New York has selected Cadre's Cadence Fulfillment system to help facilitate 3rd Party Logistics operations.

The Cadence system will manage warehouse inventory and order processing activities, order entry and call center, web-based customer self service, client activity billing and expedited parcel shipping.

Axis Global has extensive experience in 3rd party fulfillment including point of purchase displays, literature distribution, promotional mailings, product sample fulfillment and product distribution.

"Effective information systems are essential to optimizing fulfillment activities for a diverse set of clients. Our selection of the Cadence Fulfillment system demonstrates our commitment to continually moving forward to provide state-of-the-art execution systems to better serve our clients and their customers," said Brian Harvey, Axis Global's Chief Operating Officer. "It is important for us to be able to manage product sample allotments at the division, regional and sales representative level. Cadre offers this feature standard in their Cadence product eliminating the need for us to build a custom solution".

"Cadence is the perfect platform solution for Axis Global Systems," explained Daryl Grove, Cadre's Sr. VP of Operations. "The full suite of services that Axis offers requires an integrated system for each critical operation. We confident

that Cadre and the Cadence product suite will provide Axis the solution that they need to expand and grow their 3PL operations”.

### **About Cadence Fulfillment**

Cadence Fulfillment is a unified system for logistics and distribution, built on the Microsoft .Net platform. The system provides seamless operations for order management, web orders/web access, warehouse management, transportation management and activity billing. The system is built on a common data platform which eliminates the need for costly interfaces between systems. It also eliminates the duplication of critical data such as customers, products, orders and shipments. Cadence Mobile Logistics integrates wireless technology including speech, bar-code scanning, browser-text and RFID.

### **About Cadre Technologies, Inc.**

Cadre Technologies is a leading innovator of fulfillment systems used by logistics service providers, distributors and manufacturers. Its Cadence Fulfillment system is delivered by Cadre’s experienced team of implementation, training and support personnel. The company has offices in Denver, Colorado and Baltimore, Maryland.
